Office Action Summary

Application No.

10/815,293

Applicant(s)

DONOFRIO, MATTHEW

Examiner

Alonzo Chambliss

Art Unit

2814

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 September 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,4-6,12,13,17,21,23,25-27 and 46-53 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,2,4-6,12,13,17,21,23,25,26,46-48,50,52 and 53 is/are rejected.
- 7) ☒ Claim(s) 27,49 and 51 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 05 September 2006 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see remarks, filed 9/5/06, with respect to claims 1, 4-6, 12, 13, 17, 21-23, 25-27, and 46-48, 52, and 53 have been fully considered and are persuasive. The non-final rejection of these claims has been withdrawn.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, a micro mask between the mask layer and the substrate that has a thickness must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New

Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 4, 12, 13, and 26 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Krames et al. (US 5,779,924).

With respect to Claim 1, Krames teaches shaping a surface of a semiconductor layer 1 utilizing a laser to define three-dimensional geometric patterns in the layer 1. The shaping of a surface of the semiconductor layer utilizing a laser to define three dimensional geometric patterns in the semiconductor layer comprises: patterning a mask layer 5 (i.e. photo sensitive thin film) on the semiconductor layer 1 using a laser to remove mask material. Etching the semiconductor layer 1 using the patterned mask layer 5 to define the three dimensional geometric patterns (col. 6 lines 66 and 67, col. 7 lines 1-67, and col. 8 lines 12-49; Figs. 6, 7a-7c, 8-11, and 13).

With respect to Claim 4, Krames teaches wherein the semiconductor layer comprises the substrate 3 (see Figs. 8-11).

With respect to Claim 12, Krames teaches wherein a plurality of geometric pattern are provided in the surface of the semiconductor layer, wherein the geometric patterns extending into the semiconductor layer and having uninterrupted perimeters at a same level of the semiconductor layer (see Figs. 6, 7a-7c, 8-11, and 13).

With respect to Claims 13 and 26, Krames teaches wherein the surface of the substrate is on a side of the substrate opposite the light-emitting element 20 (i.e. the combination of the plurality of layers). The light-emitting element is on the substrate (see Figs. 13 and 14).

Claim Rejections - 35 USC § 103

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 5, 6, 17, and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krames et al. (US 5,779,924) as applied to claim 1 above, and further in view of Suehiro et al. (EP 1263058)

With respect to Claims 5 and 6, Krames discloses the claimed invention except for the substrate comprising a silicon carbide or sapphire. However, Suehiro discloses a substrate comprising a silicon carbide or sapphire for a light-emitting element (see paragraphs 60-64, 68, and 75). Thus, Krames and Suehiro have substantially the same environment of light-emitting element with patterned semiconductor layer. Therefore, one skilled in the art would readily recognize incorporating a sapphire or silicon carbide as a material for the substrate of Krames, since the sapphire or silicon carbide material would provide a reliable material for transmission of light for the light emitting element as taught by Suehiro.

With respect to Claims 17 and 21, Krames discloses the claimed invention except for the plurality of geometric pattern including a plurality of different geometric patterns (i.e. randomization features). However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to substitute the different geometric patterns for the triangular shape, since changing the shape of the structure is an obvious matter of design choice within ordinary skill in the art and the difference in shape of the structure does not make the device operating differently. In re Peters, 723 F.2d 891, 221 USPQ 952 (Fed. Cir. 1983). Furthermore, it is noted that in the instant specification does not describe different geometric patterns as essential or critical or the only shape that could operate the claimed invention.

7. Claims 23, 25, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krames et al. (US 5,779,924) as applied to claim 1 above, and further in view of Boehlen et al. (Laser Micro-machining article).

With respect to Claims 23 and 25, Krames discloses the claimed invention except for the mask comprising a polymer mask. The patterning a master template with a laser and embossing the mask layer using the master template. However, Boehlen discloses a mask comprising a polymer mask for forming apertures in a layer of material. Patterning a master template with a laser and embossing the mask layer using the master template (see introduction and paragraphs 2.1 and 2.2; Fig. 1). Thus, Krames and Boehlen have substantially the same environment of a mask used to form apertures in layer of material. Therefore, one skilled in the art at the time of the invention would readily recognize incorporating a polymer material as the material for the mask of Krames, since the polymer material would facilitate in the desired apertures formed by a laser in the layer of material as taught by Boehlen.

With respect to Claim 26, the combination of Krames and Boehlen discloses wherein forming the light-emitting element of Krames (see Figs. 6, 7a-7c, 8-11, and 13) is carried out subsequent to shaping the surface of the substrate in Boehlen (see Figs. 1 and 2).

8. Claims 46, 48, 50, 52, and 53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Krames et al. (US 5,779,924) in view of Suehiro et al. (EP 1263058).

With respect to Claims 46, Krames discloses patterning a mask layer on a substrate 3 using a laser to remove material from the mask layer 5. Etching the substrate 3 using the patterned mask layer to define the three dimensional geometric patterns (col. 6 lines 66 and 67, col. 7 lines 1-67, and col. 8 lines 12-49; Figs. 6, 7a-7c, 8-11, and 13). Krames fails to explicitly disclose the substrate made of silicon carbide.

Art Unit: 2814

However, Suehiro discloses a substrate made of silicon carbide (see paragraphs 60-64). Thus, Krames and Suehiro have substantially the same environment of a three dimensional geometric patterns in a semiconductor layer in an optical device.

Therefore, one skilled in the art at the time of the invention would readily recognize substitute a silicon carbide substrate for the substrate of Krames, since the silicon carbide substrate provides a stable material for a substrate when creating three dimensional geometric patterns as taught by Suehiro.

With respect to Claim 48, Krames discloses wherein the surface of the substrate is on a side of the substrate opposite the light-emitting element 20 (i.e. the combination of the plurality of layers) (see Figs. 13 and 14).

With respect to Claim 50, Krames discloses forming a micro-mask between the mask layer and the silicon carbide substrate of Suehiro. The micro-mask is configured to roughen a surface of the substrate during etching (see col. 7 lines 33-45).

With respect to Claims 52 and 53, Krames discloses a single etch and in a single patterning of the mask layer to form a three-dimensional geometric shaped (col. 6 lines 66 and 67, col. 7 lines 1-67, and col. 8 lines 12-49; Figs. 6, 7a-7c, 8-11, and 13).

However, Krames fails to disclose the plurality of geometric pattern including a plurality of different geometric patterns (i.e. randomization features). It would have been obvious to one having ordinary skill in the art at the time the invention was made to substitute the different geometric patterns for the triangular shape, since changing the shape of the structure is an obvious matter of design choice within ordinary skill in the art and the difference in shape of the structure does not make the device operating differently. In re

Art Unit: 2814

Peters , 723 F.2d 891, 221 USPQ 952 (Fed. Cir. 1983). Furthermore, it is noted that in the instant specification does not describe different geometric patterns as essential or critical or the only shape that could operate the claimed invention.

9. Claim 47 is rejected under 35 U.S.C. 103(a) as being unpatentable over Krames et al. (US 5,779,924) and Suehiro et al. (EP 1263058) as applied to claim 46 above, and further in view of Boehlen et al. (Laser Micro-machining article).

With respect to Claim 47, Krames-Suehiro discloses the claimed invention except for the mask is a polymer mask. However, Boehlen discloses a mask comprising a polymer mask for forming apertures in a layer of material (see introduction and paragraphs 2.1 and 2.2; Fig. 1). Thus, Krames-Suehiro and Boehlen have substantially the same environment of a mask used to form apertures in layer of material. Therefore, one skilled in the art at the time of the invention would readily recognize incorporating a polymer material as the material for the mask of Krames-Suehiro, since the polymer material would facilitate in the desired apertures formed by a laser in the layer of material as taught by Boehlen.

Allowable Subject Matter

10. Claim 27, 49, and 51 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowance subject matter: the prior art of record does not teach or suggest the combination of forming the

Art Unit: 2814

light-emitting element is carried out subsequent to shaping the surface of the substrate in claim 27.

A shape of the pattern of the mask layer is based on a difference between an etch rate of the silicon carbide substrate and an etch rate of the mask layer in claim 49.

The micro-mask comprises an aluminum layer between the mask layer and the substrate in claim 51.

The prior art made of record and not relied upon is cited primarily to show the process of the instant invention.

Conclusion

11. Any inquiry concerning the communication or earlier communications from the examiner should be directed to Alonzo Chambliss whose telephone number is (571) 272-1927.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-7956

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system Status information for published applications may be obtained from either Private PMR or Public PMR. Status information for unpublished applications is available through Private PMR only. For more information about the PMR system see <http://pair-dkect.uspto.gov>. Should you

Art Unit: 2814

have questions on access to the Private PMR system contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free) or EBC_Support@uspto.gov.
